

Mehmet Eren BALLI

PROFILE

I am a 4th year student of Gazi University Computer Engineering. I chose my department due to my software development studies. I started to participate in activities and work in the field of cyber security after I started university. I made their own websites from scratch on demand for the 3b4m company. I used PHP, Javascript, Ajax, Jquery technologies for backend on the Netlise Social Network website, which reached 400 members in the week it opened in the second grade of high school. I published the interfaces of the websites and programs I wrote in middle school and high school along with their photographs on Github. Except for Web Development, I made games using the python's pygame library, following OOP techniques as taught in schools. Games written with pygame, cryptographic encryption software written using personal Affine Algorithm, my simple image recognition program labeled with Linear Regression Algorithm used as one of the basic models is online with my social network site Netlise on my Github account. You can access much more on my website.
